

MINI SEEDER

If It's A Seed, We Can Plant It.

Plants A Wide Variety Of
VEGETABLE SEEDS
With Accuracy & Precision.

The SRES Mini Seed Planter is based on the Monosem MS row units. The MS Row units are designed to plant any small seed like vegetable seeds. There are 4 different versions of the MS Row unit to match most any planting configurations, including planting on beds.

The versatile Mini Seed plants a wide variety from raw to pelleted vegetable seeds with accuracy and precision. Typically the SRES MS Planter is controlled by SRES's strip controls, but it can be outfitted with any of the SRES control options (Strip, Classic, Classic Aire, Advanced and the Step 4) and like all SRES planters, the MS is upgradeable.

The Mini Seeder can be used on beds or flat ground.

Configured to use any SRES control option.
