

RUNABOUT

Don't settle for research data that is just "good enough".

A smaller, more maneuverable and affordable research planter.

The Runabout Planter is compact and light weight, (2-Row weighs only 1,500 lbs.). Mounted on a Monosem frame, the Runabout Planter is available in a 2-Row or 4-Row configuration and any row width. This planter is designed to be an entry level planter or for research done on small plots.

Typically the Runabout is configured with SRES's Classic control system, but can be outfitted with any of the SRES control options (Strip, Classic, Classic Aire, Advanced and the Step 4) and like all SRES planters, the Runabout is upgradeable.
